ULTRA LOW POWER VOLTAGE REGULATOR WITH POWER-ON-RESET

(ULPVregPOR1)Description SchematicThis is a special ultra low power linear voltage regulator with power on reset functionality. The regulator is specially designed for low power battery applications, where the nominal battery voltage does not correlate with the 0.25 m thin-oxide transistor supply voltage. The regulator is implemented in the MagnaChip 0.25 m CMOS process HM25E with EEPROM option; it util...

SIMPLE AND POWERFUL DISCREET LDO VOLTAGE REGULATOR

Do you need a simple LDO voltage regulator, but an IC version that meets your needs is not available? Make your own using this circuit. The circuit in the drawing is the actual circuit that I built and used successfully to power a shortwave radio which I have since sold (with the power supply). It has rock-solid regulation and its current capacity is limited only by the size of the MOSFET you use. Be...
